'This edition contains essential information for beginning researchers and it is presented in a clear and coherent way which engages the reader. The reader is supported through references to research, questions posed and very well thought through examples. This is a publication which is a pleasure to read cover to cover, although it can be dipped into as necessary.'

Dr Liane Purnell, Senior lecturer, Newman University College

Praise for the third edition:

'Great book, we really like it. Students were motivated much better this year than in any of the previous years, this book was a large factor in that.'

Dr Dirk Janssen, IGAD, NHTV – International Breda University

'Does exactly what it says. It gives an excellent base to build upon. Especially in a subject that some find difficult to immediately grasp. The layout is excellent and the content inclusive. The text and diagrams are very good and enables the student to have a good basis to work from during the tricky first research steps taken. I am also sure that it will be a suitable aide memoire for those more experienced researchers who may have been out of the environment for a while.'

Ms Joanne O'Donnell, School of Nursing, Midwifery and Social Work, University of Manchester

'Fast becoming a firm favourite amongst many of our students; it is both comprehensive and accessible. This third edition marks a substantial improvement over the second. Students find his chapters on formulating a research problem and reviewing the literature, particularly helpful.'

John Hoffman, Medical and Social Care Education, University of Leicester

5 Identifying variables	79
What is a variable?	80
The difference between a concept and a variable	81
Converting concepts into variables	82
Types of variable	83
From the viewpoint of causal relationship	83
From the viewpoint of the study design	89
From the viewpoint of the unit of measurement	90
Types of measurement scale	91
The nominal or classificatory scale	94
The ordinal or ranking scale	94
The interval scale	95
The ratio scale	95
Summary	95
6 Constructing hypotheses	98
The definition of a hypothesis	99
The functions of a hypothesis	101
The testing of a hypothesis	101
The characteristics of a hypothesis	102
Types of hypothesis	102
Errors in testing a hypothesis	105
Hypotheses in qualitative research	106
Summary	106
Developing a research project: a set of exercises for beginners	108
Exercise I: Formulation of a research problem	109
STEP II CONCEPTUALISING A RESEARCH DESIGN	119
7 The research design	121
What is a research design?	122
The functions of a research design	123
The theory of causality and the research design	124
Summary	129
8 Selecting a study design	131
Differences between quantitative and qualitative study designs	132
Study designs in quantitative research	134
Study designs based on the number of contacts	134
Study designs based on the reference period	139

PRINTED BY: campbellhm@tut.ac.za. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

Study designs based on the nature of the investigation	141
Other designs commonly used in quantitative research	150
Study designs in qualitative research	155
Case study	155
Oral history	156
Focus groups/group interviews	156
Participant observation	157
Holistic research	158
Community discussion forums	158
Reflective journal log	158
Other commonly used philosophy-guided designs	159
Action research	159
Feminist research	160
Participatory research and collaborative enquiry	160
Summary	161
Exercise II: Conceptualising a study design	163
STEP III CONSTRUCTING AN INSTRUMENT FOR DATA COLLECTION	167
9 Selecting a method of data collection	169
Differences in the methods of data collection in quantitative, qualitative and mixed methods research	170
Major approaches to information gathering	171
Collecting data using primary sources	172
Observation	173
The interview	176
The questionnaire	178
Constructing a research instrument in quantitative research	188
Asking personal and sensitive questions	189
The order of questions	191
Pre-testing a research instrument	191
Prerequisites for data collection	191
Methods of data collection in qualitative research	192
Unstructured interviews	192
Observation	195
Secondary sources	195
Constructing a research instrument in qualitative research	195
Collecting data using secondary sources	196
Problems with data from secondary sources	197
Summary	197

PRINTED BY: campbellhm@tut.ac.za. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

10 Collecting data using attitudinal scales	200
Measurement of attitudes in quantitative and qualitative research	201
Attitudinal scales in quantitative research	202
Functions of attitudinal scales	202
Difficulties in developing an attitudinal scale	203
Types of attitudinal scale	204
The summated rating or Likert scale	204
The equal-appearing interval or Thurstone scale	208
The cumulative or Guttman scale	208
Attitudinal scales and measurement scales	209
Attitudes and qualitative research	209
Summary	209
11 Establishing the validity and reliability of a research instrument	211
The concept of validity	213
Types of validity in quantitative research	214
Face and content validity	214
Concurrent and predictive validity	214
Construct validity	215
The concept of reliability	215
Factors affecting the reliability of a research instrument	216
Methods of determining the reliability of an instrument in quantitative research	217
External consistency procedures	217
Internal consistency procedures	218
Validity and reliability in qualitative research	218
Summary	220
Exercise III: Developing a research instrument	222
STEP IV SELECTING A SAMPLE	225
12 Selecting a sample	227
The differences between sampling in quantitative and qualitative research	228
Sampling in quantitative research	229
The concept of sampling	229
Sampling terminology	230

CONTENTS **xiii**

Principles of sampling	231
Factors affecting the inferences drawn from a sample	233
Aims in selecting a sample	234
Types of sampling	234
The calculation of sample size	246
Sampling in qualitative research	247
The concept of saturation point in qualitative research	248
Summary	248
Exercising IV: Selecting a sample	250
STEP V WRITING A RESEARCH PROPOSAL	253
13 Writing a research proposal	255
The research proposal in quantitative and qualitative research	256
Contents of a research proposal	257
Preamble/introduction	259
The research problem	261
Objectives of the study	262
Hypotheses to be tested	264
Study design	264
The setting	267
Measurement procedures	267
Ethical issues	268
Sampling	268
Analysis of data	269
Structure of the report	271
Problems and limitations	273
Appendix	273
Work schedule	273
Budget	273
Summary	274
Exercise V: Writing a research proposal	276
STEP VI COLLECTING DATA	279
14 Considering ethical issues in data collection	281
Ethics: the concept	282
Stakeholders in research	283
Ethical issues to consider concerning research participants	284

PRINTED BY: campbellhm@tut.ac.za. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

Collecting information	284
Seeking informed consent	285
Providing incentives	285
Seeking sensitive information	285
The possibility of causing harm to participants	286
Maintaining confidentiality	286
Ethical issues to consider relating to the researcher	286
Avoiding bias	286
Provision or deprivation of a treatment	287
Using inappropriate research methodology	287
Incorrect reporting	287
Inappropriate use of information	288
Ethical issues regarding the sponsoring organisation	288
Restrictions imposed by the sponsoring organisation	288
The misuse of information	288
Ethical issues in collecting data from secondary sources	289
Summary	289
STEP VII PROCESSING AND DISPLAYING DATA	291
15 Processing data	293
Data processing in quantitative studies	294
Editing	294
Coding	296
Developing a frame of analysis	311
Analysing quantitative data manually	316
Data processing in qualitative studies	317
Content analysis in qualitative research – an example	318
Data analysis in mixed methods studies	327
The role of statistics and computers in research	327
Summary	329
16 Displaying data	331
Methods of communicating and displaying analysed data	332
Text	333
Tables	333
Graphs	338
Statistical Measures	348

FIGURES

1.1	The applications of research	8
1.2	Types of research	12
1.3	Mixed/multiple methods, quantitative and qualitative approaches in social research	21
1.4	Use of mixed and multiple methods – an example	23
1.5	Mixed/multiple methods study – an example	29
2.1	The research journey	35
2.2	The research process	36
2.3	The chapters in the book in relation to the operational steps	37
3.1a	Developing a theoretical framework – the relationship between mortality and fertility	58
3.1b	Theoretical framework for the 'community responsiveness in health' study	58
3.2a	Sample outline of a literature review	59
3.2b	Main themes from the literature review for the community responsiveness study	60
4.1	Dissecting the subject area of domestic violence into subareas	69
4.2	Steps in formulating a research problem – alcoholism	70
4.3	Formulating a research problem – the relationship between fertility and mortality	71
4.4	Narrowing down a research problem – health	72
4.5	Characteristics of objectives	73
5.1	Types of variable	86
5.2	Types of variable in a causal relationship	87
5.3	Independent, dependent and extraneous variables in a causal relationship	87
5.4	Sets of variables in counselling and marriage problems	88
5.5	Independent, dependent, extraneous and intervening variables	88
5.6	Active and attribute variables	89
6.1	The process of testing a hypothesis	101
6.2	Two-by-two factorial experiment to study the relationship between MCH, NS and infant mortality	103
6.3	Types of hypothesis	104
6.4	Type I and Type II errors in testing a hypothesis	105

PRINTED BY: campbellhm@tut.ac.za. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

7.1	Factors affecting the relationship between a counselling service and the extent of marital problems	125
7.2	The relationship between teaching models and comprehension	127
7.3	The components of total change: independent, extraneous and chance	127
7.4	Building into the design	128
8.1	Types of study design	135
8.2	Before-and-after (pre-test/post-test) study design	137
8.3	The regression effect	138
8.4	The longitudinal study design	139
8.5	Classification of study designs based on the reference period: (a) retrospective; (b) prospective; (c) retrospective-prospective	140
8.6	Experimental and non-experimental studies	142
8.7	Randomisation in experiments	143
8.8	The after-only design	144
8.9	Measurement of change through a before-and-after design	145
8.10	The control experimental design	146
8.11	Double-control designs	147
8.12	Comparative experimental design	148
8.13	The placebo design	150
8.14	The cross-over experimental design	152
8.15	The replicated cross-sectional design	153
8.16	Action research design	159
9.1	Methods of data collection	172
9.2	Observing/recording group interaction on a three-directional rating scale	176
9.3	Types of interview	177
9.4	Where to go? A study of occupational mobility among immigrants	179
9.5	Occupational redeployment: a study among state government employees	180
9.6	Examples of closed questions	184
9.7	Examples of open-ended questions	185
9.8	Types of unstructured interview	193
10.1	An example of a categorical scale	204
10.2	An example of a seven-point numerical scale	205
10.3	An example of a scale with statements reflecting varying degrees of an attitude	205
10.4	The procedure for constructing a Likert scale	206
10.5	Scoring positive and negative statements	207
10.6	Calculating an attitudinal score	207
10.7	The procedure for constructing the Thurstone scale	208
12.1	The concept of sampling	230
12.2	Types of sampling in quantitative research	235
12.3	The procedure for using a table of random numbers	237

PRINTED BY: campbellhm@tut.ac.za. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

12.4	The procedure for selecting a simple random sample	240
12.5	The procedure for selecting a stratified sample	241
12.6	The concept of cluster sampling	242
12.7	Snowball sampling	245
12.8	The procedure for selecting a systematic sample	246
12.9	Systematic sampling	247
15.1	Steps in data processing	295
15.2	Example of questions from a survey	299
15.3	Some selected responses to the open-ended question (no. 11) in Figure 15.2	308
15.4	Some questions from a survey – respondent 3	311
15.5	Some questions from a survey – respondent 59	312
15.6	Some questions from a survey – respondent 81	313
15.7	An example of coded data on a code sheet	314
15.8	Manual analysis using graph paper	317
16.1	The structure of a table	334
16.2a	Two-dimensional histogram	339
16.2b	Three-dimensional histogram	340
16.2c	Two-dimensional histogram with two variables	340
16.3	Different types of bar chart	341
16.4	The stacked bar chart	342
16.5	The 100 per cent bar chart	343
16.6	The frequency polygon	344
16.7	The cumulative frequency polygon	344
16.8	The stem-and-leaf display	345
16.9	Two- and three-dimensional pie charts	345
16.10	The line diagram or trend curve	346
16.11	The area chart	347
16.12	The scattergram	348

GUIDED TOUR

How to use this book and its online resources

To better support your study, Ranjit Kumar's *Research Methodology, 4th edition* is supported by a wealth of online resources which can be accessed on the book's companion website and on a mobile version of that site called MobileStudy.

Throughout the book you will see the icons below in the margins telling you when additional resources are available online, including:

Videos containing examples of real world research and advice on how to conduct your research project.

Further Reading from selected SAGE Journal articles and book chapters allowing you delve deeper into key concepts.

PRINTED BY: campbellhm@tut.ac.za. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

Weblinks to sites offering additional resources to support your study.

Printouts of the exercises and key figures from the book, to use in class or independently to guide you through your research.

Using the companion website and MobileStudy

If you want to revise using your computer, visit the companion website at www.uk.sagepub.com/kumar4e. If you are studying on the go, scan this QR code to access a mobile optimised version of the companion website called MobileStudy on your smartphone or tablet.

On the companion website and Mobile Study you will find videos, further reading and the printouts highlighted in the margins of each chapter, along with access to a research methods online community called Methodspace, multiple choice quizzes and flashcards to test your understanding.

Lecturers who visit the companion website will gain access to:

Testbanks containing multiple choice questions for each chapter that can be used for student assessment.

PowerPointTM Slides of the key concepts of each chapter and of all the figures and tables from the book. These slides can be easily adapted to be added to your own lecture slides.

Instructors' Guide outlining the aims of each chapter with three additional chapter activities ideal for use in seminars and class discussions.

PRINTED BY: campbellhm@tut.ac.za. Printing is for personal, private use only. No part of this book may be reproduced or transmitted without publisher's prior permission. Violators will be prosecuted.

ACKNOWLEDGEMENTS

The author and SAGE would like to thank the reviewers for their time, help and feedback, which has helped shape the current edition of the book.

Luke Sloan, Lecturer in Quantitative Methods, Cardiff University

Paul Willard, Lecturer in Event Management, La Trobe University (Bendigo campus)

Dr. Margaret Hanson, Senior Lecture in Health and Life Sciences, Oxford Brookes University

Jonathan Lord, Lecturer, University of Salford

Dr Liane Purnell, Senior Lecturer, Newman University

Javed Vassilis Khan, Senior Lecturer, NHTV University

A very special thanks to Stephanie Fleischer from the University of Brighton for creating all of the companion website resources accompanying the new edition of *Research Methodology: A Step-by-step Guide for Beginners*. To view the materials supporting this book visit: <http://www.uk.sagepub.com/kumar4e>
